

Macomb Township Hydrant Maintenance Program

Macomb Township is conducting their annual Hydrant Maintenance Program for the fall of 2005. Water Department personnel will be inspecting, flushing and pumping all the hydrants in the distribution system for the winter season. This ensures the hydrants are operable for use in case of fire, flushes the system to ensure clean potable water and winterization for inclement weather. For the next several months, please do not park in front of or near the fire hydrants to assist our personnel in completion of this program. If you have any questions, please contact our office at (586) 598-0687.
